

MOUSE SHIELD UNDERCOATING

WHEN YOU MOVE OUT OF YOUR RV...
MICE MOVE IN

Diamond Kote's® New Mouse Shield Undercoating slams the door on rodent invasion. Safely and effectively.

Diamond Kote's® Mouse Shield combines a durable abrasion-resistant automotive grade undercoating with a highly concentrated all-natural rodent repelling ingredient that drives mice away.

Mouse Shield is a permanent "non-greasy" "non-sticky" coating that not only contains a super-concentrate of natural rodent repellent but the coating actually "fills in" the most common entry points for mice with a durable vulcanized rubber based coating.

Much of the damage caused by mice to an RV is caused by mice chewing their way not only into your mobile home but also into your RV's wiring.

We  mice at the gateway to your RV. Not only does the smell of the secret ingredient in our coating drive mice away but the taste of the coating is absolutely repulsive to rodents.

Ask your RV dealer to install the
Diamond Kote® Mouse Shield today.
